Object: Candidature for the position of FullStack Software engineer.

Dear Recruiter,

My name is Massinissa Saoudi, I am 26 years old, and I am a Software Engineer, currently studying for a master's degree in computer engineering specializing in mobile application development, at the University of Vistula in Warsaw, Poland.

I have got my master's degree from the University of Tizi-Ouzou, in Algeria, in the field of Information Systems Engineering, and during my 5 years of studies, I've gathered knowledge in the area of IT in general and software Development in particular.

I am a self-learner, and I privilege the concept of learning by doing, that's why I did tutorials and bootcamps from udemy, in Web and mobile development, that's what allowed me to be updated, because, in software development, the learning is continuous, this knowledge plus the module I studied at the university allowed me to develop some projects of my own.

If I had to describe my profile, I would say that I am a passionate guy, always hungry for more experience and knowledge, a team player

I want to be part of a software development company, work with experienced people, use new technologies and learn new concepts, and help our society for a more comfortable and safe future.

Dear Recruiter, I appreciate the time and consideration that you put into examining my candidature, and I want to assure you that I will work as hard as I can to fulfill the tasks and responsibilities that my role requires.

Dear Recruiter, please accept my kindest salutations, and know that I am always available for further information and details

Yours Truly.

Massinissa Saoudi
